PROFILE SUMMARY

Aeronautical Engineering graduate with hands-on industry experience in sourcing and supply chain operations using SAP, coordinating shipment documentation and customs clearance for a Spain-based team. Strong design and simulation background in CAD/CAE tools, with project experience in EV systems, aerodynamics, and additive manufacturing.

EXPERIENCE

Graduate Engineer Trainee (GET) — Sourcing Department

Feb 2026 – Present

Ampo Valves India Private Limited

- Manage end-to-end sourcing documentation in SAP, creating delivery invoices for sea and air shipments to enable smooth customs clearance.
- Coordinate remotely with the Spain-based team to track shipments, verify weights, and ensure accurate, on-time documentation.
- Generate and update Material Identification Numbers (MIN) and QR codes in the system for shipment tracking and verification at destination.
- Handle quality and compliance documentation including Heat Numbers, Material Test Certificates (MTC), and Radiographic Testing records.

Blender Animation | VFX | CGI | 3D Artist | Motion Graphics

Jan 2024 – Apr 2026

Pixar Prince Animation Studio

- Developed motion graphics and CGI animations in Blender with strong emphasis on timing, composition, and visual storytelling.
- Created high-quality 3D animations, VFX, and CGI, delivering cinematic visuals and realistic simulations.

RC Plane Design & Development

May 2025

Jet Aerospace Internship

- Designed and developed a fully functional RC aircraft from concept to flight-ready prototype, covering aerodynamics and system integration.
- Modeled and assembled aircraft components using CAD tools, ensuring lightweight structural design while maintaining strength.
- Integrated propulsion, ESC, servos, and RC control systems, achieving precise control response and reliable in-flight performance.

Electric Vehicle Battery & Motor Design

July 2025

Design – Dassault Systèmes

- Designed and modeled EV battery packs and motor assemblies in Dassault Systèmes, ensuring efficient layout, feasibility, structural reliability, and safety with lightweight integration.

EDUCATION

B.E., Aeronautical Engineering — CGPA 7.9

Oct 2022 – Apr 2026

Kumaraguru College of Technology

Class 12th, CBSE — 85% (Jun 2021 – Mar 2022)

Class 10th, CBSE — 80% (Jun 2019 – Mar 2020)

Nava Bharath National School

PROJECTS

Contra-Rotating Vertical Axis Wind Turbine (VAWT) — Kumaraguru College of Technology

- Designed a contra-rotating VAWT to enhance energy capture in low and variable wind conditions, analyzing structural stability and rotational interaction between counter-rotating stages.

Drone Design and Additive Manufacturing — Kumaraguru College of Technology

- Designed drone components for additive manufacturing, applying design-for-manufacturing principles and validating printed parts through assembly and functional evaluation.

Design and Development of Intake Duct of Unmanned Aerial Target Vehicle

- Designed and optimized an S-duct air intake for the ABHYAAS high-speed aerial target aircraft to feed a micro gas turbine engine, using CFD analysis to meet tight airframe space constraints while maximizing pressure recovery and minimizing flow distortion at the engine inlet.
- Fabricated the optimized design via 3D printing and validated performance through wind tunnel testing, correlating experimental pressure data with CFD predictions to confirm intake reliability and improved engine start performance.

SKILLS

Languages: C, C++, Python | Software: SAP, SolidWorks, ANSYS Workbench, CAD, Blender

Technical Areas: CFD & Aerodynamic Simulation, EV Battery & Motor Design, Additive Manufacturing, Supply Chain & Sourcing Documentation

Certifications: ANSYS Virtual Intern in Fluid Dynamics, Drone Design & Structural Analysis, Electric Vehicle Battery & Motor, Blender Digital Sculpting, RC Plane Design & Development

Achievement: Asian Record Holder, Roller Skating
